

Helping your child succeed in Mathematics

The key to success in Mathematics is practise, therefore it is important that your child begins their revision as early as possible. Revision should include a combination of reviewing topics studied across years 10 and 11 and exam-style questions.

Alongside the notes and examples from class, we have access to a number of useful resources, as detailed below.

- Hegarty Maths – on this website you have access to clips and tasks to help aid students revision. In addition, there is Fix up 5, which provides students further questions on areas that require further practice. There is also Memri quizzes which are personalised revision quizzes. Teachers will also use this for setting homework and home study tasks for students.
www.hegartymaths.com
Students will need the school postcode (NG34 7PP), their name and date of birth to logon. When they login for the first time they will create their own password.
- Just Maths – on this website you can find videos and worksheets on topics split into 3 sections: Working Towards (grades 1-3), Crossover (Grades 4-5) and Working Above (Grades 6-9)
